

Solid Cast Pig Selection Guide

Process Pigs

PDP - Product Displacement Pig

The PDP design offers the ability of batching and displacement of products in lines with 1.5 degree bends. With multiple sealing discs, cross-contamination and bypass are no longer a problem.

SWP

Achieve higher efficiency in product displacement, batching and liquid removal with the SWP product line evacuators. SWP will ensure that less product will be wasted, and will also help produce more efficient, faster processing results.

VPR

The VPR design has tight scraping/sealing rings that are made for extra flexibility and negotiating fittings. The durable design ensures a liquid-tight seal for maximum efficiency.

Utility Pigs

UFCP - Solid Cast Urethane 3-Cup Pig

Strategically placed cups make it possible for the pig to navigate through restrictions in valves and pass through tees.

UFDP - Solid Cast Urethane Flexi Disc Pig

The design of the multi-disc ensures that sealing elements are always centered in the pipeline

UFDCP - Solid Cast Urethane Cup Disc Combo Pig

Best of both worlds in one design.
